Statistical Analysis of Financial Data in R (Springer Texts in Statistics)

René Carmona

Statistical Analysis of Financial Data in R (Springer Texts in Statistics) René Carmona

Although there are many books on mathematical finance, few deal with the statistical aspects of modern data analysis as applied to financial problems. This textbook fills this gap by addressing some of the most challenging issues facing financial engineers. It shows how sophisticated mathematics and modern statistical techniques can be used in the solutions of concrete financial problems. Concerns of risk management are addressed by the study of extreme values, the fitting of distributions with heavy tails, the computation of values at risk (VaR), and other measures of risk. Principal component analysis (PCA), smoothing, and regression techniques are applied to the construction of yield and forward curves. Time series analysis is applied to the study of temperature options and nonparametric estimation. Nonlinear filtering is applied to Monte Carlo simulations, option pricing and earnings prediction. This textbook is intended for undergraduate students majoring in financial engineering, or graduate students in a Master in finance or MBA program. It is sprinkled with practical examples using market data, and each chapter ends with exercises. Practical examples are solved in the R computing environment. They illustrate problems occurring in the commodity, energy and weather markets, as well as the fixed income, equity and credit markets. The examples, experiments and problem sets are based on the library Rsafd developed for the purpose of the text. The book should help quantitative analysts learn and implement advanced statistical concepts. Also, it will be valuable for researchers wishing to gain experience with financial data, implement and test mathematical theories, and address practical issues that are often ignored or underestimated in academic curricula.

This is the new, fully-revised edition to the book *Statistical Analysis of Financial Data in S-Plus.*

René Carmona is the Paul M. Wythes '55 Professor of Engineering and Finance at Princeton University in the department of Operations Research and Financial Engineering, and Director of Graduate Studies of the Bendheim Center for Finance. His publications include over one hundred articles and eight books in probability and statistics. He was elected Fellow of the Institute of Mathematical Statistics in 1984, and of the Society for Industrial and Applied Mathematics in 2010. He is on the editorial board of several peer-reviewed journals and book series. Professor Carmona has developed computer programs for teaching statistics and research in signal analysis and financial engineering. He has worked for many years on energy, the commodity markets and more recently in environmental economics, and he is recognized as a leading researcher and expert in these areas.

From reader reviews:

Thomas Hawkins:

This Statistical Analysis of Financial Data in R (Springer Texts in Statistics) usually are reliable for you who want to certainly be a successful person, why. The main reason of this Statistical Analysis of Financial Data in R (Springer Texts in Statistics) can be on the list of great books you must have is giving you more than just simple reading through food but feed a person with information that maybe will shock your preceding knowledge. This book will be handy, you can bring it almost everywhere and whenever your conditions in the e-book and printed types. Beside that this Statistical Analysis of Financial Data in R (Springer Texts in Statistics) forcing you to have an enormous of experience for instance rich vocabulary, giving you trial run of critical thinking that could it useful in your day activity. So , let's have it appreciate reading.

Jennifer Williams:

You could spend your free time to learn this book this book. This Statistical Analysis of Financial Data in R (Springer Texts in Statistics) is simple to create you can read it in the area, in the beach, train along with soon. If you did not have got much space to bring the printed book, you can buy often the e-book. It is make you better to read it. You can save often the book in your smart phone. Therefore there are a lot of benefits that you will get when you buy this book.

Thomas Rice:

Is it you who having spare time after that spend it whole day by watching television programs or just telling lies on the bed? Do you need something totally new? This Statistical Analysis of Financial Data in R (Springer Texts in Statistics) can be the response, oh how comes? It's a book you know. You are thus out of date, spending your spare time by reading in this brand new era is common not a geek activity. So what these guides have than the others?

Joan James:

Many people said that they feel fed up when they reading a guide. They are directly felt that when they get a half elements of the book. You can choose often the book Statistical Analysis of Financial Data in R (Springer Texts in Statistics) to make your personal reading is interesting. Your skill of reading skill is developing when you such as reading. Try to choose basic book to make you enjoy to study it and mingle the opinion about book and reading especially. It is to be very first opinion for you to like to available a book and learn it. Beside that the publication Statistical Analysis of Financial Data in R (Springer Texts in Statistics) can to be your brand new friend when you're truly feel alone and confuse in doing what must you're doing of their time.
