Partial Differential Equations and Boundary-value Problems With Applications (Pure and Applied Undergraduate Texts)

Mark A. Pinsky

Partial Differential Equations and Boundary-value Problems With Applications (Pure and Applied Undergraduate Texts) Mark A. Pinsky
Building on the basic techniques of separation of variables and Fourier series, the book presents the solution of boundary-value problems for basic partial differential equations: the heat equation, wave equation, and Laplace equation, considered in various standard coordinate systems--rectangular, cylindrical, and spherical. Each of the equations is derived in the three-dimensional context; the solutions are organized according to the geometry of the coordinate system, which makes the mathematics especially transparent. Bessel and Legendre functions are studied and used whenever appropriate throughout the text. The notions of steady-state solution of closely related stationary solutions are developed for the heat equation; applications to the study of heat flow in the earth are presented. The problem of the vibrating string is studied in detail both in the Fourier transform setting and from the viewpoint of the explicit representation (d'Alembert formula). Additional chapters include the numerical analysis of solutions and the method of Green's functions for solutions of partial differential equations. The exposition also includes asymptotic methods (Laplace transform and stationary phase). With more than 200 working examples and 700 exercises (more than 450 with answers), the book is suitable for an undergraduate course in partial differential equations.

From reader reviews:

Joan Freeman:

Nowadays reading books become more than want or need but also work as a life style. This reading routine give you lot of advantages. The advantages you got of course the knowledge your information inside the book that improve your knowledge and information. The details you get based on what kind of publication you read, if you want have more knowledge just go with knowledge books but if you want truly feel happy read one with theme for entertaining like comic or novel. Often the Partial Differential Equations and Boundary-value Problems With Applications (Pure and Applied Undergraduate Texts) is kind of guide which is giving the reader unpredictable experience.

Bryan Lopez:

Is it an individual who having spare time after that spend it whole day by watching television programs or just telling lies on the bed? Do you need something totally new? This Partial Differential Equations and Boundary-value Problems With Applications (Pure and Applied Undergraduate Texts) can be the respond to, oh how comes? It's a book you know. You are and so out of date, spending your spare time by reading in this brand new era is common not a nerd activity. So what these textbooks have than the others?

Justin Davis:

Don't be worry should you be afraid that this book will certainly filled the space in your house, you might have it in e-book way, more simple and reachable. This specific Partial Differential Equations and Boundary-value Problems With Applications (Pure and Applied Undergraduate Texts) can give you a lot of buddies because by you taking a look at this one book you have issue that they don't and make an individual more like an interesting person. This book can be one of one step for you to get success. This guide offer you information that perhaps your friend doesn't understand, by knowing more than other make you to be great folks. So , why hesitate? We need to have Partial Differential Equations and Boundary-value Problems With Applications (Pure and Applied Undergraduate Texts).

Cory Thomas:

That publication can make you to feel relax. This specific book Partial Differential Equations and Boundary-value Problems With Applications (Pure and Applied Undergraduate Texts) was bright colored and of course has pictures on the website. As we know that book Partial Differential Equations and Boundary-value Problems With Applications (Pure and Applied Undergraduate Texts) has many kinds or style. Start from kids until young adults. For example Naruto or Investigator Conan you can read and feel that you are the character on there. So , not at all of book usually are make you bored, any it can make you feel happy, fun and relax. Try to choose the best book in your case and try to like reading which.
