Myths and Realities: Conflicting Currents of Culture and Science

John Whedbee

Myths and Realities: Conflicting Currents of Culture and Science John Whedbee
Myths and Realities creates a comprehensive picture of human life and culture, while at the same time placing it within the larger cosmic context. In recent decades, all areas of human knowledge have expanded to an unprecedented degree, so the overall context of human existence is at last beginning to emerge.In order to present such a wide-ranging portrait, Myths and Realities looks at history and human nature from several different viewpoints, giving special attention to four major topics: culture, science, religion and war. Science is a major contributor because it is the most reliable means of acquiring knowledge. Religion is part of the wider subject of beliefs in general, and these have been given particular consideration because any kind of ideology or belief tends to distort the worldview. War has been mankind's constant companion, but without its underlying mythology, it would lose all glory and romance. It would just be senseless savagery.Although man has many distinctive qualities, one of his most remarkable characteristics is his capacity to believe in all kinds of nonsensical notions. In fact, "the human animal will believe practically anything-so long as it makes absolutely no sense at all."
